

Meeting Nov 22, 2021

Today, we decided to meet up to talk about phase 3 and what we should do for it. We have found this website that helps us display our database on a website, so I think that's the route we will be going. That link is <https://pythonbasics.org/flask-sqlite/>. For the style of the website, we are thinking of having the home page be with champion pictures, so you can just click on the ones you want to look at. Also, in order to incorporate the complex queries, we are also thinking of an advanced search for queries that don't easily fit with a champion. For now, I think we just need to learn more about flask and how it plays with sqlite3 to see how we can make the website. We also would need to learn more html/javascript/css to style the website and to show that the advanced search is actually working.

We will be using sqlite3, flask, html, javascript, and css.

We will meet up at a later date soon to be decided.
