

Meeting Nov 29, 2021

Today, we continued to meet to work on our website for CSE 111. In our meeting, we have a website that you can access by downloading the extension on vscode called “open in browser” by TechER. This allows us to see the changes we make in the code in real time and also don't need to buy a domain or host it. So far, we have a home page with all of the champion images currently in the system. Later on, we will add code to make each champion clickable to show stuff about them and add in checkboxes for the complex queries.
