Meeting Nov 1, 2021

With Jim Nguyen & Jared Giampietro

We figured out Google docs had a new thing with the @ symbol. It's really cool. We can use our

beloved checklist bullet point again!

We also learned about Live View for VSCode. It allows us to collaborate on the same file in real

time.

For Phase 2, We met today to discuss phase 2 and the steps towards completing it. We have

created the schema for all of our tables and now they just have to be populated.

Once they are populated, we have to create 20 diverse SQL queries.

We decided to divide the csv tables between us to quickly get all the data we need to populate the

table.

We are splitting it up 5 and 4. Jared will do champion, champItems, items, champRole, role.

Jim will do lore, abilityInfo, championSkins, and championStats.

We will have 15 champions at the start: Nasus, Lee sin, Akali, Master Yi, Xin Zhao, Volibear,

Ryze, Twisted Fate, Aurelion Sol, Draven, Caitlyn, Lucian, Blitzcrank, Thresh, Nautilus.

We will add/delete more during the SQL Query stage.
